Your  
grip on  
safety

Safe pedestrian routes for all

The ability to travel alone in safety is not something people with a visual impairment can take for granted, dependent as they are on clear and uniform route markings. These form their primary navigation aid in familiar surroundings, but even more so in unknown territory. Burdie Visualsafe offers solutions that enable the visually impaired to travel safely and independently.

Burdie specialises in the application of route markings in public transport facilities, shopping centres, public spaces and during special events. We can provide routing lines, hazard markings and related signage.

***Creating a safe environment is our profession.***

# Safe platforms

Markings around and inside train stations are essential to ensure the safety of passengers and visitors, and of course the same applies to bus, tram and underground stations. Platforms with clearly indicated safety zones are a must for the visually impaired.

You have reasons to expect high-quality markings from Burdie. We provide markings in compliance with the strict standards set by Dutch rail infrastructure organisation, ProRail. Our markings are hard-wearing, non-slip and easy to clean. Be assured that markings that markings provided by Burdie will make your platform safe. Whatever the specifications, Burdie Visualsafe can fulfil them. Your platform will be safe and suitable to use by everybody. A show piece.

# Markings

In addition to markings for people with a visual impairment, Burdie also caters for the other types of markings on and around platforms. Burdie ensures long-lasting, high-visibility, hard-wearing and easy to clean edge markings, track clearance markings, routing lines and hazard markings. Burdie can apply markings over practically any surface, without defects, in compliance with the strictest standards and longlasting.

## Edge markings

A neat, high-visibility edge marking establishes a clear boundary between the platform and the track.

## Routing lines

Routing lines are essential to the visually impaired. They provide the perfect means for orientation and direction-finding. As they need to be safe and predictable, routing lines are subject to the strictest safety standards.

## Track clearance markings

The necessary space for a train to pass through a station unobstructed needs to be clearly marked.

## Hazard markings

Hazard markings provide the visually impaired with the warning that they are about to leave a safe zone. High-quality markings can be live-saving. Hazard markings by Burdie meet the strictest safety standards.

# Platform renovation

Renovating a station platform requires custom-design as many factors are involved, of which the safety of passengers and employees is a primary concern. Also, you will want to cause the least inconvenience to passengers. If possible, trains should keep on running according to timetable. Burdie guarantees an effective and properly planned approach to the platform renovation process with all due attention to the safety of passengers and employees while at the same time maintaining continuity. In addition Burdie can use Burdie Visualsafe to apply the necessary markings to existing surfaces. We take any challenge in our stride. We will repair the existing material to bring it up to standard, remove old markings, and level the surface before applying new markings. Leave it to the Burdie experts to handle every aspect of your renovation.

## Solutions for public spaces

Burdie also facilitates markings in shopping centres or other public spaces.

*Burdie Visualsafe  
the reassurance of long-lasting  
and effective markings.*

## Burdie Visualsafe features

- > Long-lasting high-quality markings that:  
are hard wearing,  
non-slip, and  
easy to clean.
- > Fully certified, so quality assured.
- > Suitable for application to practically  
any surface.

# Your partner

It goes without saying that Burdie has the expertise to provide clear and unambiguous markings such as routing lines, but we like to take things a step further. We also have the knowledge and experience to repair, level and clean surfaces before applying new markings. The existing situation determines our approach. Therefore we will make use of the most suitable application for each type of surface. Whatever the situation, we will provide you with the right approach to removing obsolete or worn markings and applying new ones.

Having started out in the flooring business, Burdie has amassed a wealth of knowledge about road and floor surfaces over the years. We have developed into specialists in the application of road surface coatings, metalling and non-slip solutions for railways and other infrastructures. Burdie's experts will deliver a pristine performance.

## Contact

Would you like to find out in which way we can be of assistance?

Please contact us. You can reach us by phone at +31 (0)345 63 38 15. We will be glad to help you.

### Quality assured

*Every Burdie Visualsafe marking complies with the extremely strict design standards set by Dutch rail infrastructure organisation, ProRail. The non-slip and cleaning qualities of Burdie floor finish coatings have been tested by Dekra Rail inspection and certification and found to satisfy the strict standards that apply on train platforms.*
